

Helping Businesses Rebuild Their IT Infrastructure After Hurricane Sandy

onthenetOffice, the leader in enterprise-level hosting solutions, is helping businesses affected by Hurricane Sandy rebuild their IT infrastructure so that they can get back to serving their clients. Numerous businesses were forced to close during the storm for the protection of their employees. Many buildings were severely damaged or left without power, making it difficult for businesses to resume operations.

"Our goal at onthenetOffice is to help businesses that were affected by Hurricane Sandy. These businesses have already lost time and resources due to the storm; we want to help them get back to business as soon as possible."

Alexander Saca, CEO onthenetOffice

In order to help get affected businesses operating again, onthenetOffice is offering to rebuild their IT infrastructures for free; they are waiving all setup, startup, and migration fees associated with hosted solutions. onthenetOffice's team of technicians will help set up a secure, outsourced infrastructure for their business clients (including systems that are completely off-site and can be accessed through the cloud, or a combination of on-site and off-site systems).

Once the infrastructure is up and running, onthenetOffice can assist businesses with recovering data that may have been lost during the hurricane or in its aftermath. A hosted infrastructure will also allow employees (who have power) to work from home if their office building was damaged by the storm. In addition to the immediate benefits, there are several benefits that will help businesses in the long run. Technicians perform regular, offsite backups of clients' data so that if their on-site systems or devices are somehow damaged in the future, their data can be recovered quickly and easily.

If you are interested in taking advantage of onthenetOffice's offer, call or email them today to get started.
